maximize the efficiency and effectiveness  
of your business documents

*Document effectiveness today is measured not only by how well a document communicates, but how efficiently and effectively it is created and distributed. Create!form integrates seamlessly within midrange operating systems and allows you to replace expensive pre-printed forms with customized electronic forms that can be centrally managed, distributed and archived. Create!form products give you the flexibility to select the most effective method for your company's business communications whether it's print, fax, e-mail, archive or the internet. Put e-forms to work for your enterprise, without locking your company into existing hard copy output solutions with Create!form.*

## design

Design professional, custom forms with ease using Create!form. Create!form allows you to work with sample output from your existing applications and reformat your documents without any programming changes. Give your documents the look and feel you want; change fonts, colors, add graphics, and more. Then view and proof your merged forms onscreen prior to distribution.

## stream

Create!stream, our advanced document management solution, enables you to prepare your documents exactly the way you want, and distribute them to any point in your enterprise for printing, faxing, e-mailing and archiving via the Create!form family of products. Improve your business processes by automatically determining the most appropriate delivery format for each of your documents based on conditions in the data.

## print

Eliminate the expense and hassle of managing pre-printed forms using Create!print. Print high quality custom forms and documents on demand using plain paper on your PostScript laser printer. The optional Create!micr module offers you the flexibility to print checks on plain stock allowing you to reduce storage costs and eliminate waste from outdated checks.

## fax & email

Send your business documents via fax and/or email, saving both time and money on traditional delivery methods while providing your customers and suppliers with the information they need instantly. Create!fax and Create!email provide the flexibility to automatically send any document, subdocument or page, delivering an accurate and inexpensive electronic version of your formatted documents.

## archive

Create!archive allows you to automatically index and archive your business documents. Documents are saved as small and efficient PDF files, eliminating the expense of printing and storing hard copy archives. Archived documents can be viewed and retrieved from within Windows or any internet browser using customized search screens. This gives you the option to provide your staff and customers online access to their archived documents. With Create!archive, save time and money while providing the most efficient customer service.
